MOBILE WALLET

WHAT IS MOBILE WALLET?

A mobile wallet is a way to carry your debit card information in a secure digital form on your device.

Instead of using your physical card to make purchases, a mobile wallet allows you to pay with your smartphone, tablet, or smartwatch in stores, in apps or on the web!

SO YOU HAVE SOME QUESTIONS

How can I get mobile wallet?

Most newer phones will come pre-installed with a “mobile wallet” but if not, you may install one from the app store.

Where can I use mobile wallet?

Many retailers offer updated payment processing terminals that accept mobile wallets. Samsung for example, is currently accepted at over 10 million stores in the U.S, while Apple Pay is also accepted at millions of stores. Even e-commerce companies have begun to adapt their systems to mobile wallet technology.

Can I add more than one card to my mobile wallet?

Yes, you can add several cards to your mobile wallet. You will only have one primary card, which defaults to the first payment card that was added to your mobile wallet.

Is it safe to use mobile wallet?

Mobile wallet provides the same protection and benefits as your physical card, with the convenience of making secure in-store purchases and in-app transactions on your Apple Pay, Samsung Pay and Google Pay equipped devices. Information that you upload to a mobile wallet gets encrypted, making it potentially safer than carrying physical cards with you.

READY TO GET STARTED?

1. Add your FSB debit card to your phone’s mobile wallet or download one from your app store.
2. Authenticate your identity with a PIN, fingerprint, or iris/face scan.
3. Then tap to pay at participating businesses.
4. You will receive payment confirmation on your mobile device. (If enabled on device.)
